

Air Conditioning Coil Cleaner

Pays for Itself with Every Use.

- Removes soils and oxidation from fins and coils
- Improves efficiency of air conditioning units
- Reduces utility and electric bills
- Reduces maintenance and repair costs
- Simple to use

Save Money with Coil Cleaner

Air conditioner condenser coils take hot air from inside a building or home and disperse it into the air outside. When condenser coils are dirty, dusty, oxidized or blocked with debris, the unit works harder and use more energy to achieve the same degree of cooling – costing potentially hundreds or even thousands of extra dollars in electricity each year!

Professional strength Coil Cleaner from Nyco cleans coils quickly and easily so units run more efficiently and consume less electricity.

The foaming action of powerful Coil Cleaner effectively removes the accumulation of soils, dirt, and oxidation film from coils and fins on air conditioning units, humidifiers, condensers, and heat exchange equipment. When coils and fins are clean, air circulates more fully and AC systems operate and cool more efficiently. This improves the overall performance of a cooling system, while reducing power consumption and electricity bills.

Simply spray Coil Cleaner on, watch it foam, let it work for 3-5 minutes, then wash it off with water. See nycoproducts.com for complete usage instructions.

Benefits:	Savings:
Units cool more efficiently when clean	Saves on annual energy costs
Regularly cleaned units need fewer repairs	Saves on periodic maintenance costs
When units don't have to work as hard, they last longer	Saves on replacement costs

Coil Cleaner can also be used regularly with central air conditioning systems as well as with window or portable units, to help keep them running at peak performance levels.
