

Defoaming Egg Wash

Defoaming Detergent

Foam from egg protein can be a serious problem with the operation of egg washing equipment. Normal egg washing systems require the use of a separate defoaming agent in addition to the egg wash detergent. Defoaming Egg Wash breaks foam levels in the hot water wash tank, eliminating the need for an additional defoaming product. Defoams as it cleans, eliminating excess foam during the washing process in hot water applications. For use in federally inspected egg, poultry, meat, and other food plants.

DIRECTIONS

Read the entire label and SDS for proper use, handling and storage before using this product.

Add directly to wash tanks through automatic feed equipment. Consult your chemical representative for specific use applications and directions as well as concentration and water temperature recommendations.

FAST FACTS

- Defoams as it cleans
- Removes soil from eggshells
- Effective on protein
